

The WauK® board An Infected Patient Transport Tool

- The WauK® board reduces the number of Healthcare / Rescue Personnel needed to transport a contaminated or Infected High Risk patient, reducing potential exposure.
- The WauK® board design has no sharp edges or pinch points that could compromise the integrity of a Bio or Haz mat suit.
- The WauK® board is a sealed unit that allows easy and thorough decontamination after each patient use.
- The WauK® board Dolly system allows for easy, safe movement of patients in all situations.

The WauK® board is designed to be decontaminated after use and **allows a single person to transport an infected patient by rolling them.**
