

How do you easily extract **BARIATRIC PATIENTS?**

Stop hurting your back! Use the new, patented **WauK™ board** to transport bariatric patients through mobile homes, tight hallways, elevators, stairs, and more.

- ✓ **don't carry... roll a patient instead**
- ✓ **prevent career-limiting back injuries**
- ✓ **minimize patient movement**

The **WauK™ board** is a rollable backboard that first responders use to extract an immobilized patient from tight spaces with ease. The one-of-a-kind design adds the convenience of a dolly to a backboard:

- 3" wheels
- foldable foot rest

Close the footrest to use **WauK™ board** as a standard backboard. Open the footrest to transport patients through tight spaces.

U.S. Patent # 8209803
