

How do you easily extract a patient in the supine position from SMALL BATHROOMS?

Stop struggling in tight bathrooms! Use the new, patented **WauK™ board** to easily transport patients in tight spaces, hallways, elevators, mobile homes, and more.

- ✓ don't carry... *roll* a patient instead
- ✓ prevent career-limiting back injuries
- ✓ minimize patient movement

The **WauK™ board** is a rollable backboard that first responders use to extract an immobilized patient from tight spaces with ease. The one-of-a-kind design adds the convenience of a dolly to a backboard:

- 3" wheels
- foldable foot rest

Close the footrest to use **WauK™ board** as a standard backboard. Open the footrest to transport patients through tight spaces.

U.S. Patent # 8209803
